

## The Carbon Trust (*Not-For-Profit*)

The Carbon Trust is an independent not for profit company set up by the Government with support from business to 'take the lead on low carbon technology and innovation in this country, and put Britain in the lead internationally' (Tony Blair).

Part of the UK's Climate Change Programme, the Carbon Trust encourages and promotes the development of low carbon technologies (both energy efficient technologies and low carbon energy supplies) to support the transition to a low carbon technology in the UK. Key to this aim is its support for UK businesses in reducing carbon emissions through funding, supporting technological innovation and by encouraging more efficient working practices.

After thoroughly investigating the offerings from Access, Sage and Microsoft, Financial Controller Martin Ellis chose Exchequer Enterprise as their core business solution due to its functionality, ease of use and the superior ability to extract information into MS Excel using the OLE functionality. The Paperless technology was of key importance as it supported the 'green' ethos of the organisation as a whole. Job Costing is becoming increasingly important to track the costs and revenues for all of its many activities and campaigns the Carbon Trust are involved in.

***Financial Controller Martin Ellis chose the following solution for The Carbon Trust in December 2001:***

### **Exchequer Enterprise Accounting Solution – 4-user Multi-User Dual-Currency**

Financial Modules (Sales Ledger, Purchase Ledger, Nominal Ledger incl. Cashbook and Invoicing), Project, Job & Time Costing, Report Writer, OLE SavePack and BACS Plug-in.

#### ***And had this to say:***

*"The main reason we bought from you was that you were the nearest to us. Your strengths are that staff are eager to help, responsive and pleasant to deal with. Benefits of resellers such as yourselves are that you are able to provide tips on how other users use the system."*

**Martin Ellis, The Carbon Trust**
